

Some of the world's largest discoveries of clean-burning natural gas can be found where this flag flies.

In the noise of the great energy debate, a remarkable natural blessing may get lost.

Within the borders of America lie some of the world's most significant natural gas resources. Resources to provide the clean-burning alternative we need to power our future. Not just today or tomorrow, but by conservative estimates, for more than 100 years.

Clean-burning? Nearly 50% cleaner than coal.

Natural gas, America's alternative fuel.

Found in America, made in America, for America.
